PROFILE

Senior Backend Engineer with 5+ years building and supporting production Laravel systems across commerce, SaaS, EdTech, AI/media and financial operations. Technical ownership spans schema and API design, backend architecture, secure integrations, queues, billing/payment state, test automation, CI/CD and incident recovery. Operated a multi-vendor commerce platform serving approximately 100K requests/day and delivered a backend API estate with 260+ endpoints.

TECHNICAL EXPERTISE

Backend: PHP 8.x, Laravel 8-13, REST/GraphQL/OpenAPI, OOP/SOLID, modular design, multi-tenancy, Sanctum, Passport, OAuth.

Databases and resilience: MySQL, PostgreSQL, Redis, transactions, SQL performance, caching, queues, locks, idempotency, reconciliation.

Cloud and quality: AWS/S3, DigitalOcean, Docker, Linux, Nginx, Forge, Cloudflare, CI/CD, PHPUnit, Pest, PHPStan/Larastan.

Product integrations: Shopify Admin GraphQL, payment providers and wallets, email/messaging channels, AI APIs, Vue 2/3 project environments, Livewire.

PROFESSIONAL EXPERIENCE

Senior Backend Engineer | Grids Apps | 2021-Present

- Own backend delivery across enterprise learning, SaaS and operational products: API/schema design, third-party integrations, data migration, incident resolution and release readiness.
- Modernize established Laravel systems without disrupting production: authorization hardening, complex imports, query tuning, observability and maintainable service boundaries.
- Review technical designs and code with engineers while staying hands-on with critical paths and production failures.

Senior Backend Engineer | Arrays | 2025-2026 (part-time)

- Delivered backend design and implementation for Saudi-focused AI/media and event products, including domain modeling, permissions, queued pipelines and provider integrations.
- Designed recoverable workflows for AI generation, payments, credit settlement, storage and asynchronous callbacks.

Senior Backend Engineer | Jomlakwt | 2023-2025 (remote, part-time)

- Led Laravel API architecture and production reliability for Kuwait multi-vendor commerce at roughly 100K requests/day.
- Maintained 260+ documented APIs spanning sellers, search, checkout, delivery, wallets, installments and refunds; resolved MySQL, Nginx, PHP-FPM and queue bottlenecks.

SELECTED ENGINEERING PROJECTS

VeriCatalog | Shopify Catalog QA SaaS (Founder / Lead Engineer)

- Built an embedded Shopify SaaS with 100+ deterministic catalog-quality checks for pricing, identifiers, shipping, content, imagery and localization.
- Designed cursor-based incremental/recurring scans with dedicated queues, locks, retries and stalled-run recovery.
- Developed guarded fix proposals and bulk remediation with preflight, fingerprints, quotas, verification scans, audit trails and AI spending limits.

Tik Video | AI Generation SaaS

- Architected 11 backend domains for users, projects, videos, packages, subscriptions, orders and payments in Laravel 12 with a Nuxt 4/Vue 3 product interface.
- Integrated 8+ AI/media providers behind replaceable contracts, queue stages and polling/webhook completion; settled reserved credits after processing and refunded failed jobs.

Omnichannel CRM | Multi-tenant Messaging

- Designed tenant-aware ingestion/sending for nine channel types including Gmail/email, WhatsApp, Instagram, Messenger, Telegram, Twilio SMS and web chat.
- Implemented signature-checked webhooks, idempotent writes, contact/conversation resolution, async delivery and failure recovery.

Culture Bridge and Sajah | Events and Ticketing

- Developed coordinated APIs, admin and operational portals for registration, QR check-in, scheduling and payments.
- Integrated Apple Pay, Stripe and other GCC payments with verified callback/transaction state.

TrippleStock | POS and Inventory

- Worked on multi-warehouse inventory, purchases, sales, invoices, payments and accounting in Laravel/Vue 2.
- Repaired duplicate transactions, stock restoration and financial reconciliation edge cases.

Dorosak, IBAL/JTHOOR and eMicroLearn

- Delivered multi-role APIs for students, teachers and parents; learning subscriptions, exams, imports, analytics and external synchronization.
- Improved transactional imports, permissions, legacy compatibility, Livewire admin operations and reporting performance.

Gym Management | Attendance and Subscriptions

- Implemented evidence-based data reconciliation across biometric check-ins, schedules, remaining entries and subscriptions.
- Added tests for duplicate attendance, stale balances, deadlocks and recovery.

Additional platforms | Financial and commerce infrastructure

- Implemented payment/wallet/escrow workflows, Egyptian electronic invoicing, charity donations, e-commerce customizations and recurring lesson scheduling.
- Designed reusable Shopify app infrastructure for token lifecycles, Redis locking, privacy and webhook handling.

OPEN SOURCE

mykholy/paymentgateway: reusable Laravel integrations spanning 30+ payment providers.

mykholy/laravel-paymob: payment callback/HMAC verification and wallet/card flow package.

laravel-accessproof: authorization/tenant-isolation regression testing. **laravel-flowguard:** transaction-aware idempotency/outbox development (ongoing).

EDUCATION

Bachelor of Computer Science | Menoufia University, Egypt
